

# Fire and Security Composite Safes

Our Composite Safes are constructed of composite material encased in steel. They are high security containers which are also fire rated. Dial combination locks are standard on chest safes, but you may select various upgrade options including electronic combination locks as shown here. Models come with multiple interior options, including lockers, extra shelves and drawers. Choose from pull handles and spoke handles to configure your safe for the job at hand. Underwriter's Laboratories® tests high security safes to extreme standards. These models feature UL's TL-15 and TL-30 rating for high security safes.

Model KC6524 >

## Features

- TL rated high security door with hard plate
- TL rated construction body
- 60 minute Omega Point fire rating
- Group II dial combination lock (digital lock optional)
